Different origins, same goals

Augment natural supply of juveniles
and

Optimize harvests by overcoming
recruitment bottlenecks

Stockings

Stockings

“Responsible Approach”

- Prioritize and select target species for enhancement
- Develop a species management plan
- Define quantitative measures of success
- Use genetic resource management
- Use disease and health management
- Form enhancement objectives and tactics
- Identify released hatchery fish and assess stocking effects
- Use an empirical process to define optimal release strategies
- Identify economic and policy objectives
- Use adaptive management

(Blankenship and Leber 1995)

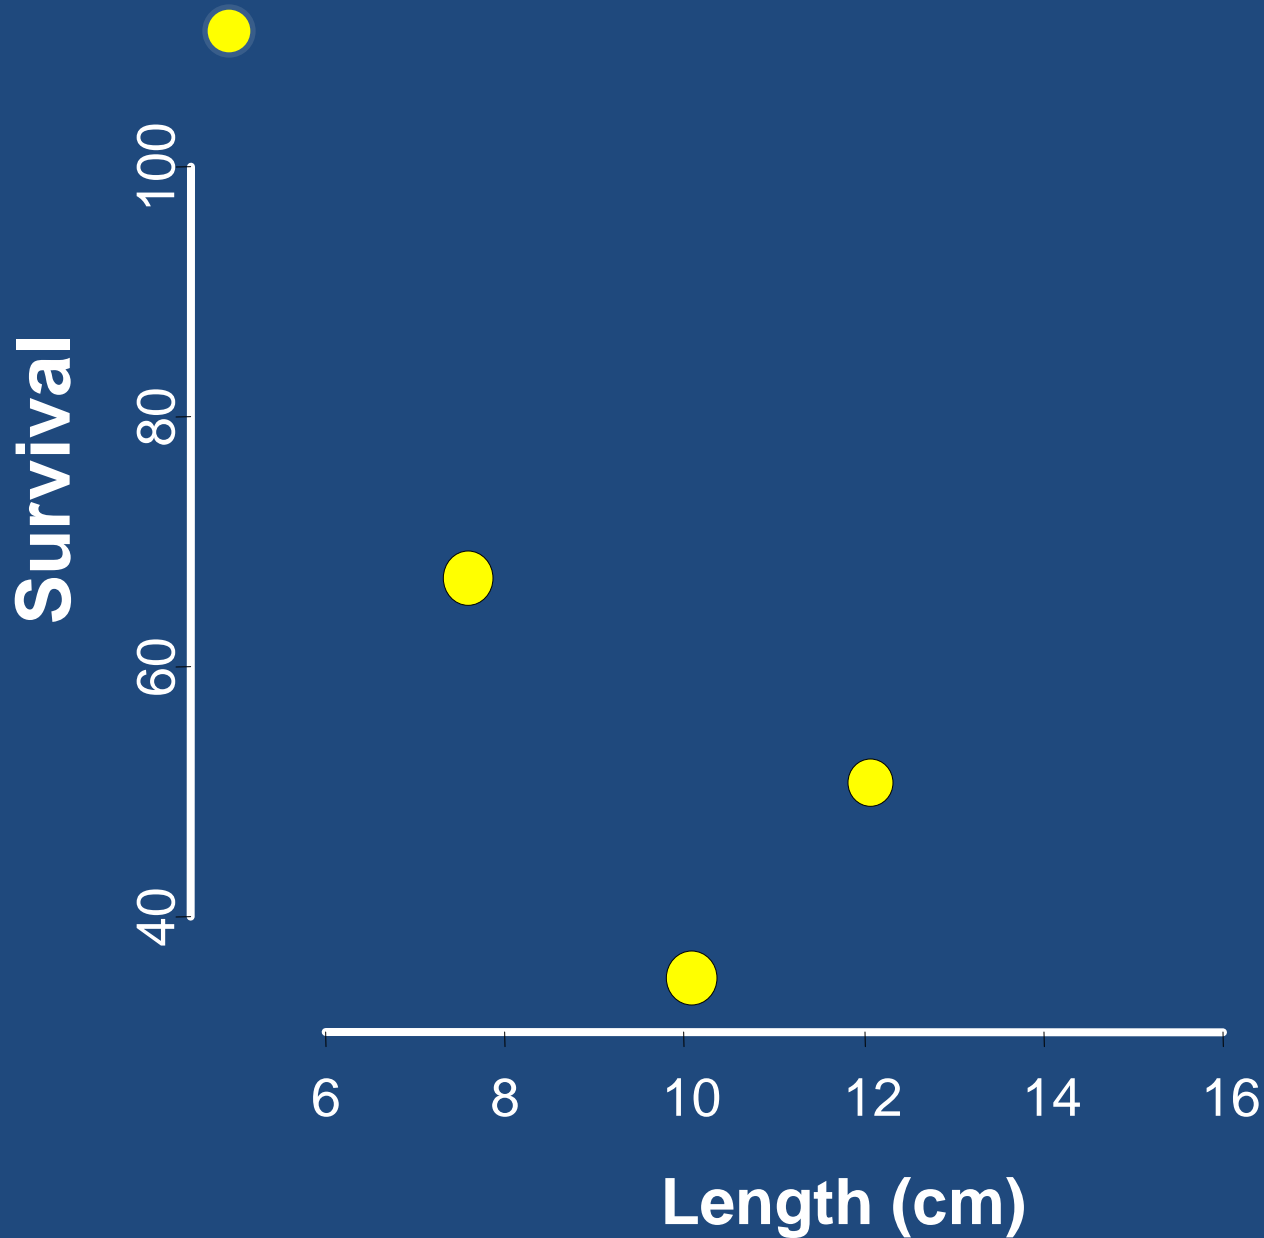

Tagging techniques

Size at release

Size at release

Prey size
functional
response of sea-
gull predator

(Sparrevohn et al.
2003; Sparrevohn &
Støttrup 2006)

Size at release

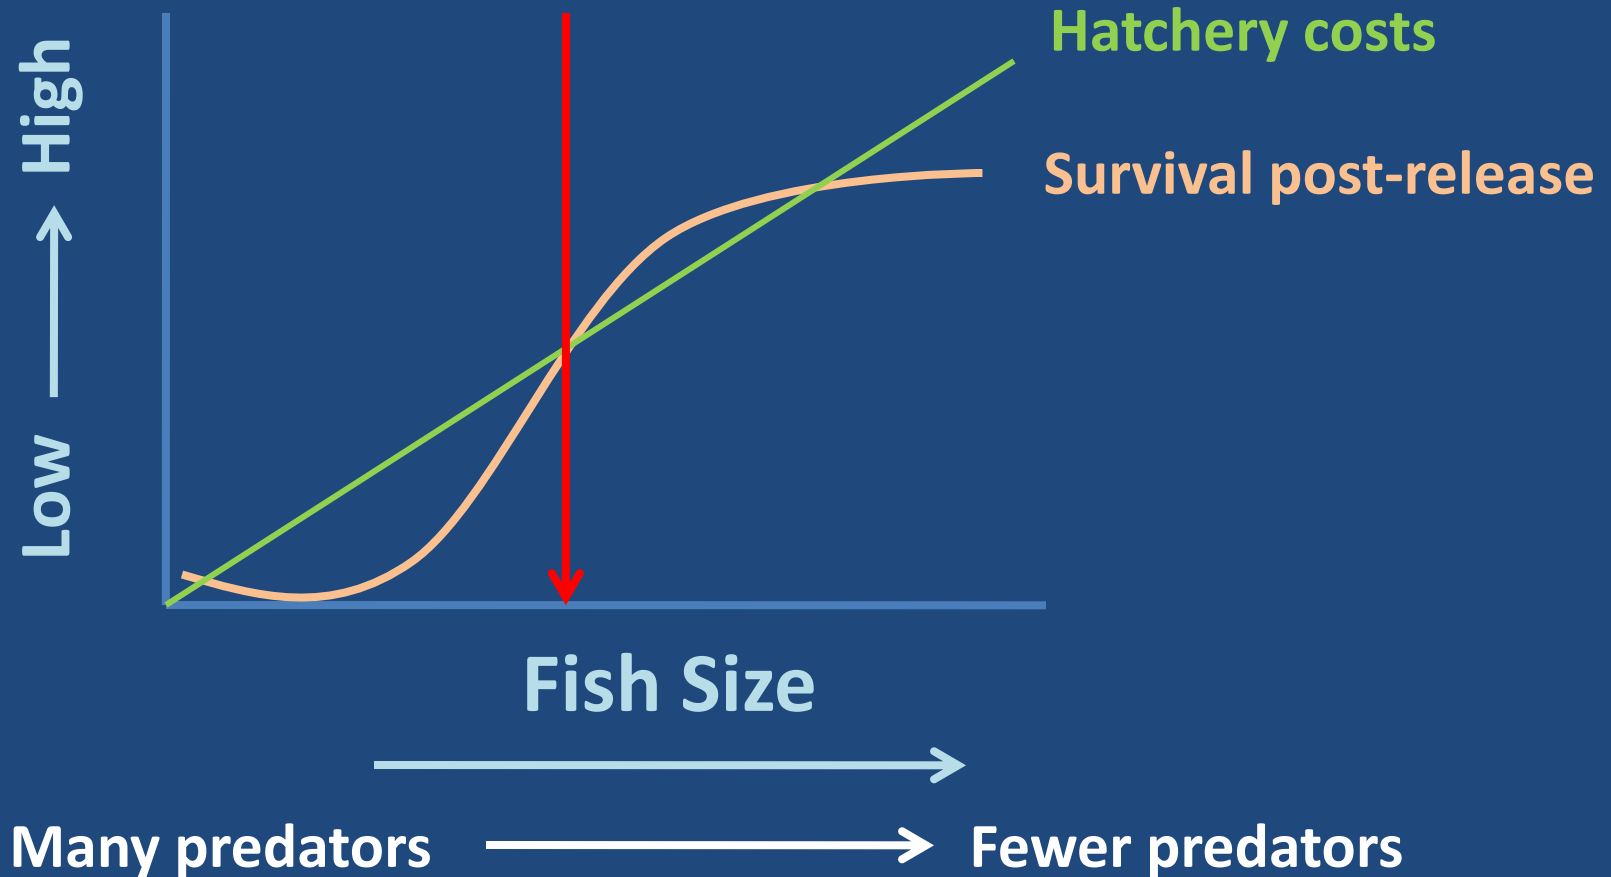

Cultured Fish

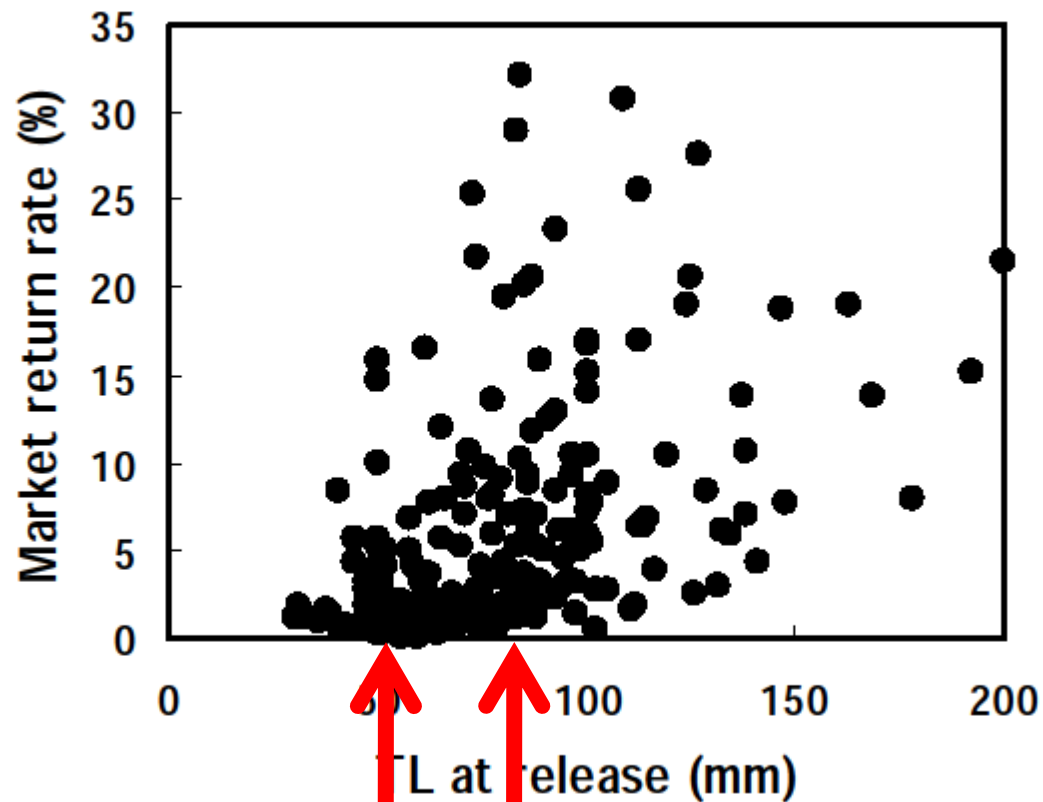

Size at release

Optimal release size

Size at release

Release season

- “Timing is everything”
 - When prey are most abundant
 - Predators least abundant
 - In synchrony with wild population
- Will vary by latitude and the natural seasonal progression of wild populations
- Usually this means at the beginning of the warming season for age 0 fish

Release season

“Timing is everything”

Release habitat

Google

86°44'17.88" N 43°40'24.00" W

Eye alt 11001.00 km

Release micro-habitat

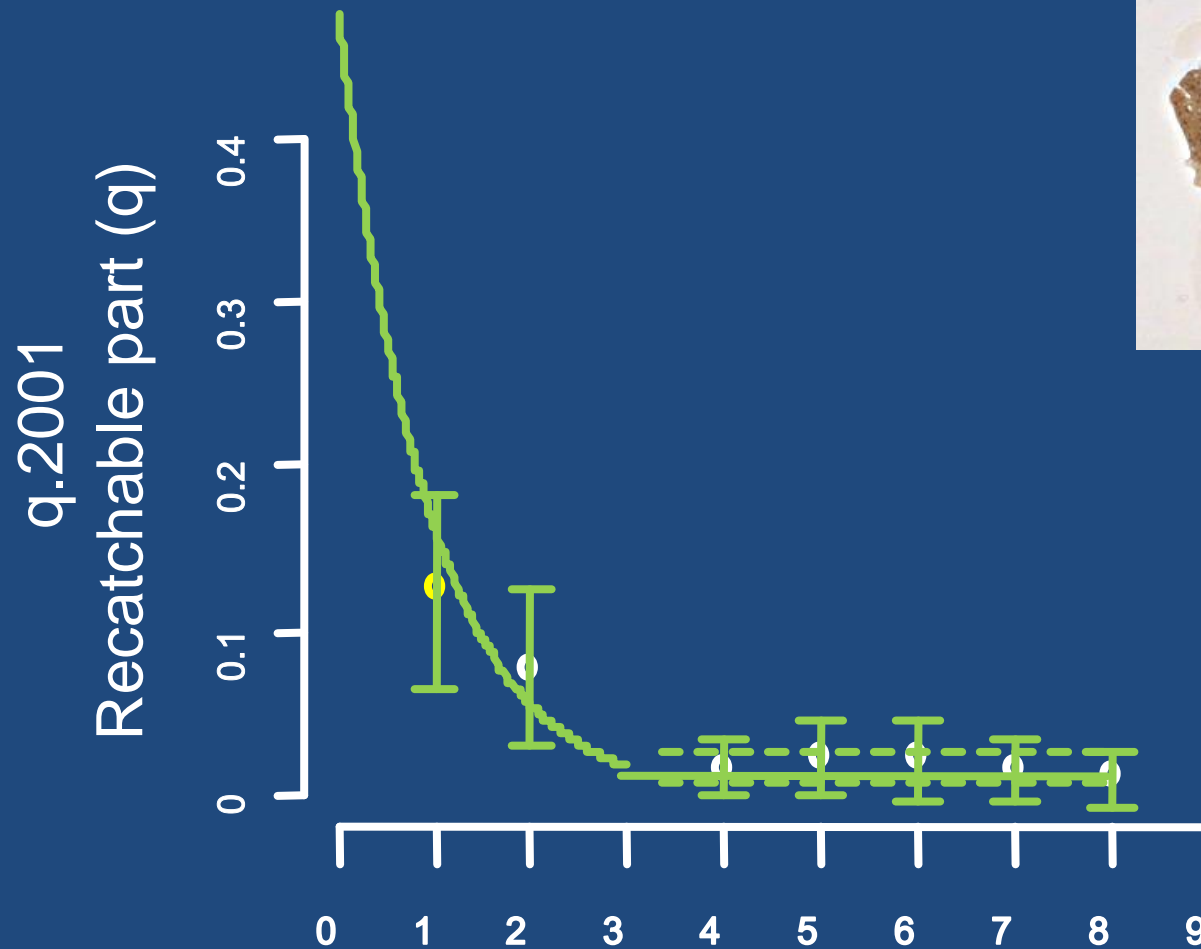

- Appropriate for wild flatfish
- Suitable type and amount of prey exist
- Offers predator refuge
- Area that provides high survivorship but has low accessibility for the wild population

SANDY, SHALLOW ZONES

Release Methods

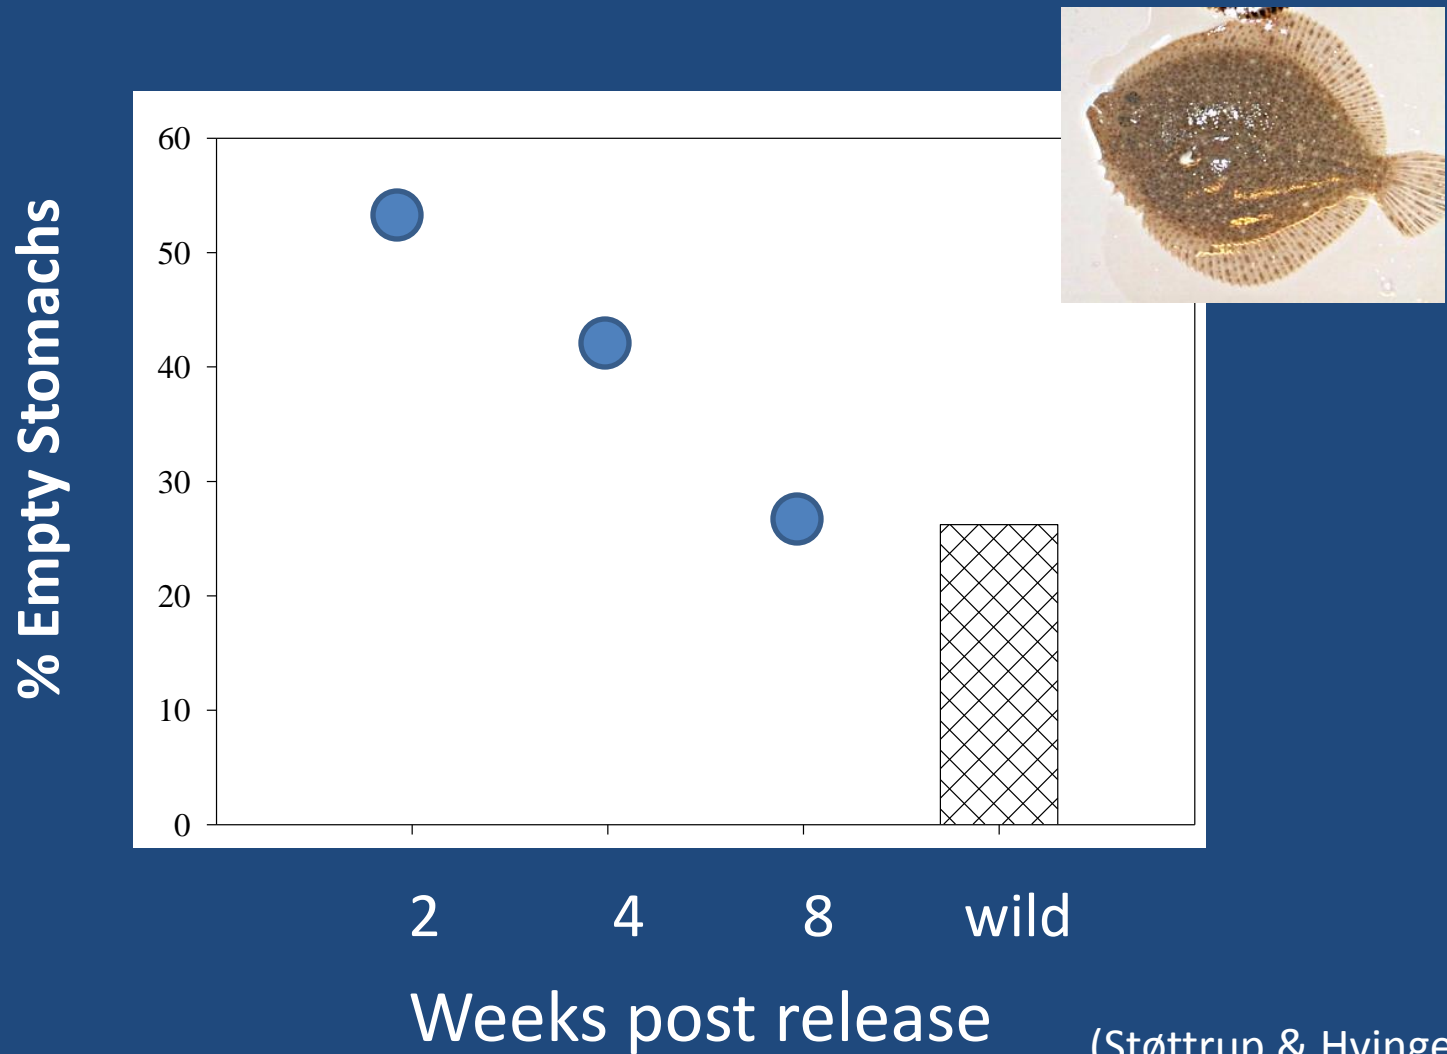

High Initial Mortality

10 cm TL

(Sparrevohn & Støttrup 2007)

Delay in feeding

(Støttrup & Hvingel 1998)

Poor prey selection

(Fairchild, unpublished data)

Foraging learning curve

Non-evasive
prey

Shrimp

Fish

(Støttrup & Hvingel 1998)

Abnormal feeding behavior

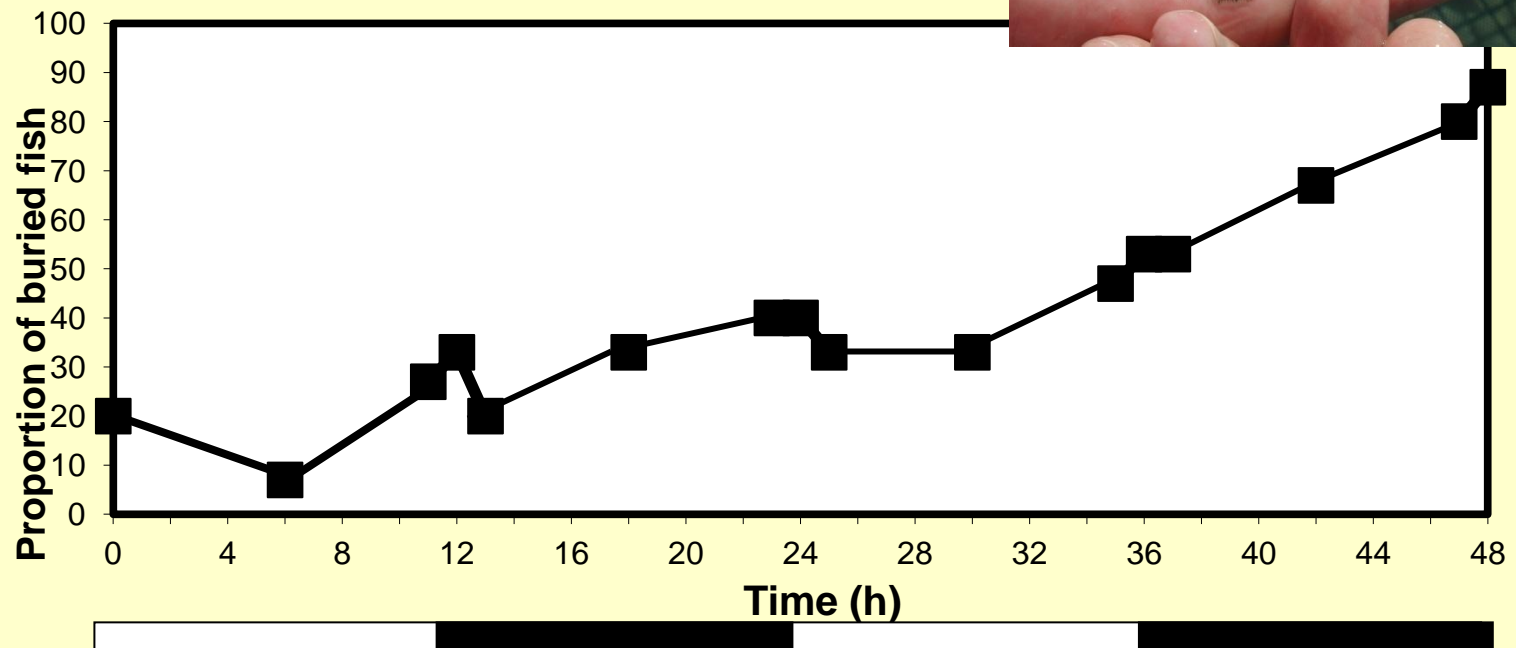

FREQUENCY

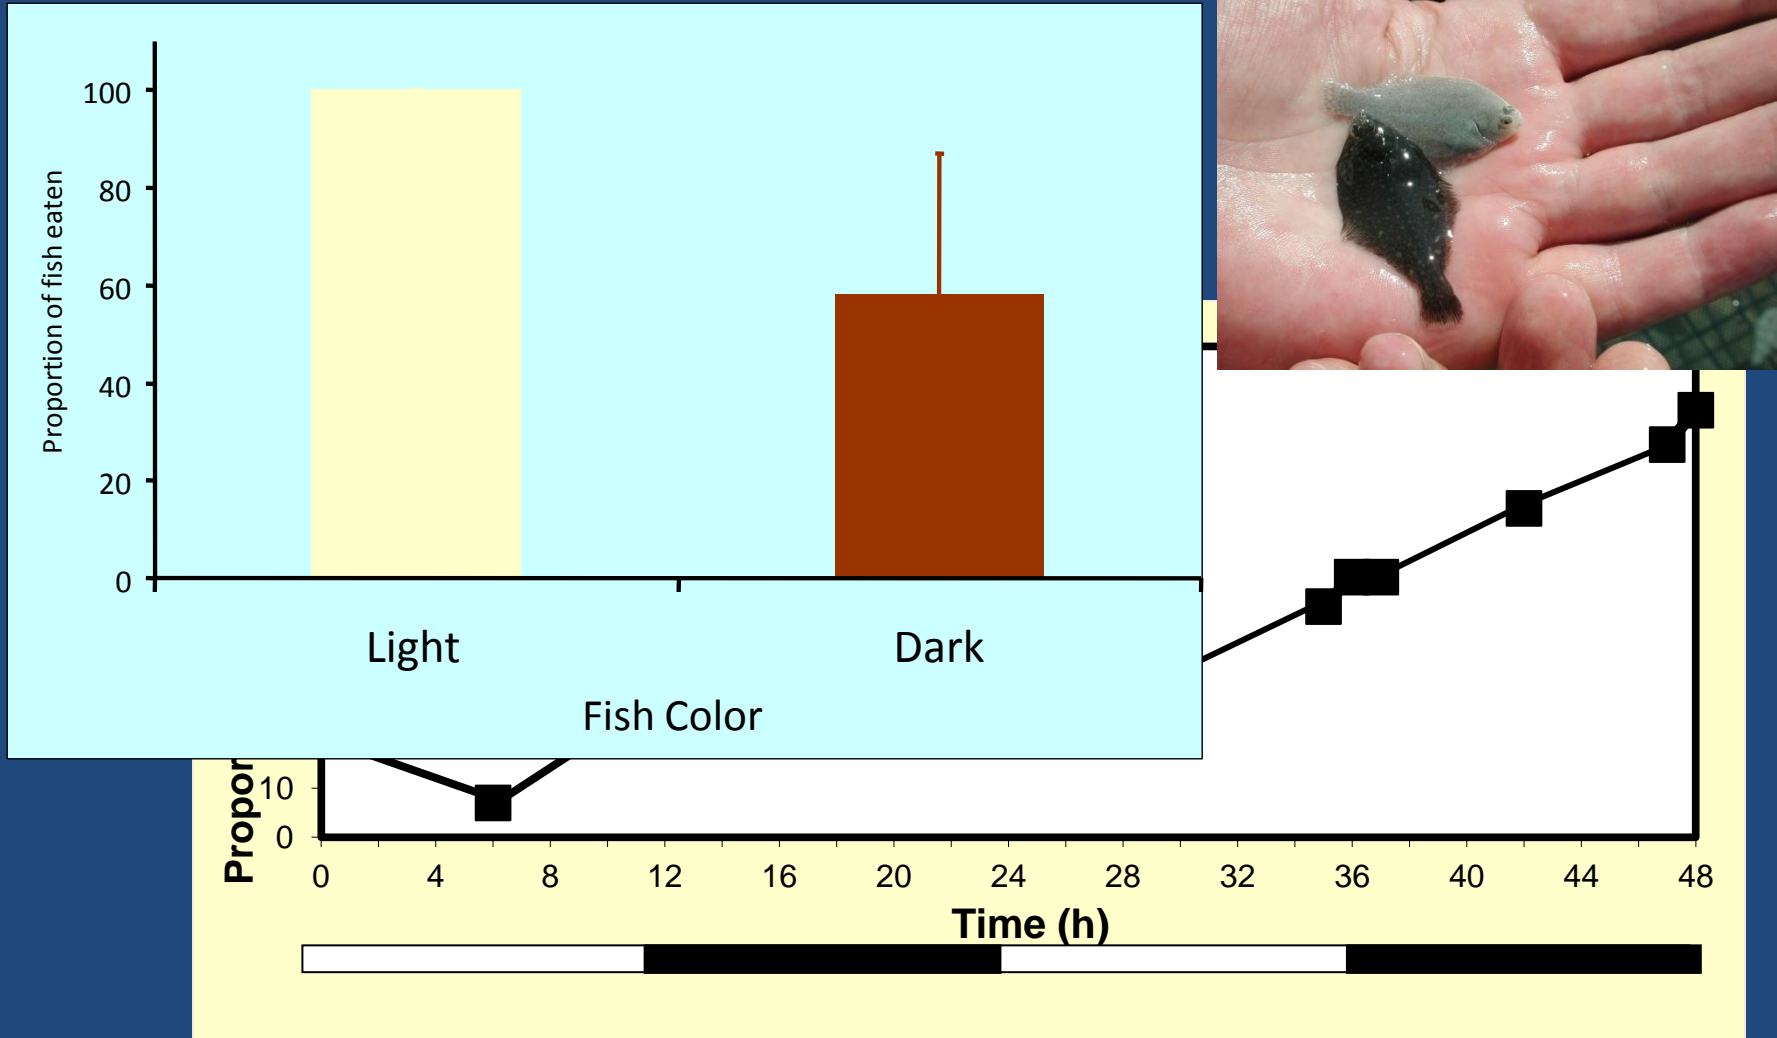

(Furuta 1998)

Non-cryptic behavior

(Fairchild & Howell 2004)

Non-cryptic behavior

(Fairchild & Howell 2004)

Release strategy: *In-situ* conditioning

Cages (conditioned)

Direct release (Naive)

Higher site fidelity

**Unconditioned
Hatchery Fish**

Wild Fish

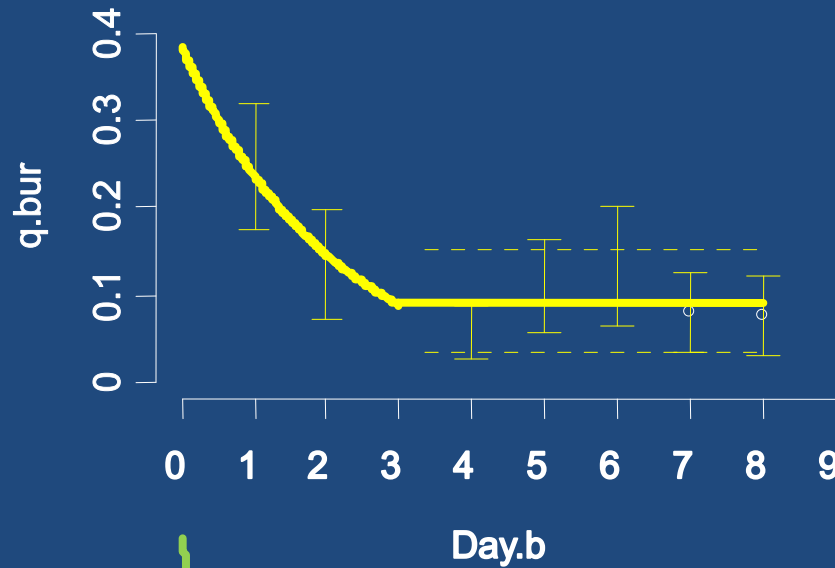

Release spot

100 m

Better cryptic abilities

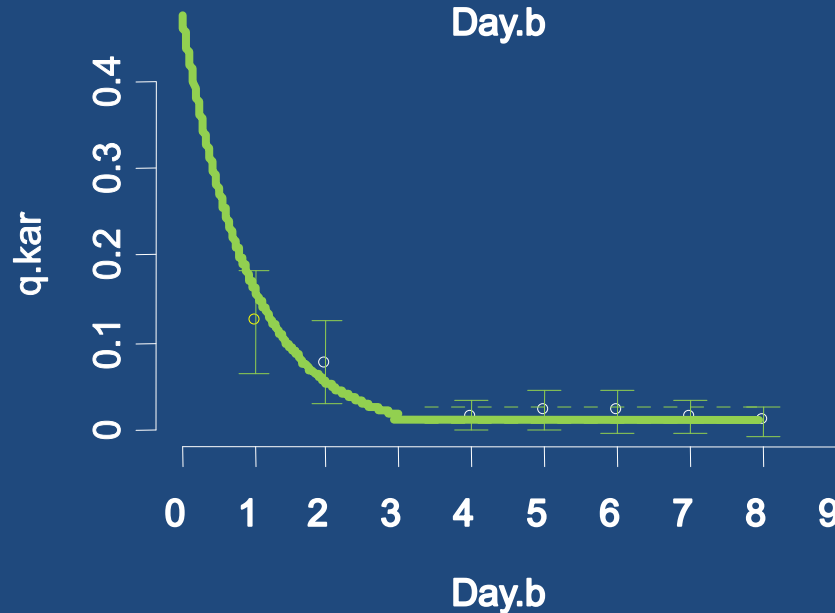

Higher survival

62 %

10 cm conditioned

34 %

10 cm naive

(Sparrevohn & Støttrup 2007)

Not without drawbacks...

Are green crabs attracted to acclimation cages containing winter flounder?

Not without drawbacks...

Are green crabs attracted to acclimation cages containing winter flounder?

(Fairchild et al. 2008)

So why bother?

Flatfish Enhancement Model?

- Find appropriate release sites and season based on survey data.
- Pilot-scale stocking of large age 0 fish.
- Use conditioning methods to overcome initial mortality.
- Assess success and apply active adaptive management.
- Scientifically test methods.
- Calculate economic feasibility.

Muito obrigada
